

## A comprehensive remote patient monitoring program combining technology, with a coaching and “nudge” methodology:

State-of-the-art tablet and bluetooth integrated peripherals for symptoms and biometrics daily monitoring

Evidence-based protocols for management of 21 conditions, combining physical and mental health, with prevention of re-admissions

Virtual consultations with up to 5 different stakeholders at the same time

ACG's Predictive Modeling for enrollment of ideal candidates to the program

Interdisciplinary care team of RN, RD, MD, Social Workers, Psychologists and Care Coordinators, utilizing a patient-centric approach

Quadruple Aim Focus: improving population health, reducing costs, enhancing patient experience and improving provider satisfaction

Evaluation and management of SDOH

Bilingual Capabilities

ROI > \$3:1

Asthma

Diabetes

COPD

Hypertension

CHF

# Monitoring Equipment

## InterVIEW mobile platform

Patient's  
device

Supplied if Needed

### Available Tablet or Byod on Android

#### Medical Scale

#### Bloodpressure Monitor

#### Pulse Oximeter

# Medtronic

### Compatible

#### Glucose Meter

Our multidisciplinary team will have access in real time to reports on blood sugar level, blood pressure, oxygenation level and weight at the desired frequency, in order to offer the patient a better level of care.
